MARINE ECOLOGY – PROGRESS SERIES

HISTORY: 'Marine Ecology – Progress Series' (MEPS) was established in response to requests from numerous marine ecologists from all over the world. The series is based on 'Marine Ecology' – the first comprehensive, integrated treatise on life in oceans and coastal waters – conceived, organized and edited by Professor Otto Kinne, and published by John Wiley & Sons.

AIM: 'Marine Ecology – Progress Series' serves as a world-wide forum for all aspects of marine ecology, fundamental and applied. The journal covers microbiology, botany, zoology, ecosystem research, biological oceanography, fisheries, aquaculture, pollution, environmental protection, conservation and resource management.
Ecological research has become of paramount importance for man's future. The information presented here should, therefore, encourage critical application of ecological knowledge for the benefit of mankind and, in fact, of life on earth. 'Marine Ecology – Progress Series' strives for

- ◯ complete coverage of the field of marine ecology
- ◯ the highest possible quality of papers
- ◯ quick publication
- ◯ a high technical standard of presentation.

Editor and publisher attempt to achieve these goals in close cooperation with advisors, referees, contributors and readers. Criticism and advice are cordially invited (please address to the editor).

SCOPE: 'Marine Ecology – Progress Series' is international and interdisciplinary. Presenting research papers, reviews and notes, it has been created for prompt publication of contributions concerned with:

Environmental Factors: Tolerances and responses of marine organisms (microorganisms, autotrophic plants, and animals) to variations in abiotic and biotic components of their environment; radioecology.

Physiological Mechanisms: Synthesis and transversion of organic material (mechanisms of auto- and heterotrophy); thermo-, ion-, osmo- and volume-regulation; stress resistance; non-genetic and genetic adaptation; population genetics; orientation in space and time; migrations; behaviour.

Cultivation: Maintenance and rearing of, as well as experimentation with, marine organisms under environmental and nutritional conditions which are, to a considerable degree, controlled; analysis of the physiological and ecological potential of individuals, populations and species; determination of nutritional requirements; ecological aspects of aquaculture; water-quality management; culture technology.

Dynamics: Production, transformation, and decomposition of organic matter in marine ecosystems; food webs; trophic interrelations; population dynamics; plankton ecology; benthos ecology; estuarine and coastal ecology; wadden-sea ecology; coral-reef ecology; deep-sea ecology; open-ocean ecology; polar ecology; theoretical ecology; ecological modelling; evolution.

Ocean Management: Applied marine field ecology; inventory, protection and management of living resources in coastal areas, estuaries and open oceans; ecological aspects of fisheries; pollution of marine areas and organisms; protection of life in the seas; management of populations, species and ecosystems; management of coastal zones and sea areas.

Subscription Information

1985: 7 volumes (20–26), 3 issues per volume
North America: US $ 147 per volume.
Annual rate for 7 volumes: US $ 1029 including postage, handling and insurance.

All other countries: DM 286 per volume.
Annual rate for 7 volumes: DM 1932 plus postage, handling and insurance.

1986: 8 volumes (27–34), 3 issues per volume
North America: US $ 147 per volume.
Annual rate for 8 volumes: US $ 1176 including postage, handling and insurance.

All other countries: DM 276 per volume.
Annual rate for 8 volumes: DM 2208 plus postage, handling and insurance.

Special Conditions (for personal use of individual scientists only)
(1) Advisors: free copies.
(2) Staff referees: DM 48 per volume, providing their institutional library subscribes to the journal.
(3) All other scientists: DM 85 per volume, providing their institutional library subscribes to the journal.
(4) Students: DM 75 per volume, providing their university library subscribes to the journal.

Subscriptions are entered with prepayment only.

Missing issues must be claimed within 4 months after publication.

Publisher: Inter-Research, P.O.Box 1120, D-2124 Amelinghausen, Federal Republic of Germany.

Manuscript Preparation, Mailing and Processing

Preparation

Research papers (in general not exceeding 10 printed pages), reviews (up to 30 printed pages) and notes (1–3 printed pages) must be typewritten with double spacing. 'Marine Ecology – Progress Series' invites interpretative rather than descriptive contributions. Reviews should be critical, instructive evaluations of the state-of-the-art – not mere compilations of information.

Abstracts. All contributions must be preceded by a brief, concise abstract. In the shortest possible way, the abstract should outline the scope of the paper and highlight its main results and conclusions.

Figures must be very carefully prepared, numbered and accompanied by brief, precise legends. For examples consult recent issues. Mark desired position of figures in the manuscript margin.

Tables should not be excessive in size. They must be numbered and be headed by brief, compendious legends. Mark desired position of tables in the manuscript margin. Unusual symbols used must be explained.

Genus and species names: underline for *italics*. Genus names should appear in full the first time mentioned in a given paragraph.

Citation of literature. All literature quoted in the text must be listed, in alphabetical order of author names, at the end of the manuscript. Please abbreviate publications according to 'World List of Scientific Periodicals', latest edition, London. For examples of literature citation see below.

Mailing

Address manuscripts (original plus 2 copies) to an advisor or to the editor. For safety use registered mail.

Processing

Manuscripts are critically evaluated by at least 3 reviewers. The editor then decides on acceptance or rejection. Acceptable manuscripts are usually returned to the author requesting consideration of comments and criticism. Present rejection rates range from 35 to 50 % for manuscripts from different parts of the world.

When an accepted manuscript is ready for publication, the author will be notified and the date of manuscript acceptance fixed. This date appears at the end of each printed contribution. Average time between acceptance and publication is 4 mo.

The author receives 2 sets of proofs directly from the printer. Printing errors must be carefully corrected. At this stage, stylistic changes are not acceptable without compensatory payment. Please return 1 set of proofs by air mail.

Offprints: Forty offprints (reprints) of each contribution will be made available free of charge. Additional offprints can be purchased. For offprint prices consult the form accompanying the proofs. Orders for additional offprints must be made when returning the proof (use the form provided).

'Marine Ecology – Progress Series' levies no page charge.
The last issue of each set of 10 volumes features a combined author/title index.

Copyright
With the acceptance of a manuscript, the copyright is transferred to the publishers. Reproduction of any part of this publication by any means, as well as translation, requires their written permission. Trade marks or names appearing in this series may be subject to protective regulations or laws. The Article Fee Code (at the bottom of the first page of each paper) indicates the copyright holder's consent that, in the USA, copies of the paper may be made for personal or internal use. This consent is granted on condition that the copier pay the stated fee through the Copyright Clearance Center, Inc. P.O.Box 8891, Boston, Mass. 02114, for copying beyond that permitted by Section 107 or 108 of the US Copyright Law.

Advisors

Advisors to 'Marine Ecology – Progress Series' are appointed for a four-year period. They are expected to:

- ○ critically evaluate the scientific merits of manuscripts submitted for publication
- ○ suggest topics and authors for reviews
- ○ select and present suitable high-quality manuscripts
- ○ draw attention to new facts, concepts and methods

In addition to the advisors listed below, about 300 referees cooperate anonymously.

Institute of Biology of South Seas, Academy of Sciences Uk. SSR, 2, Nahimov St., Sevastopol, 335000, USSR
Chemical ecology, radioecology, radiotracers, pollution

Riley, J. P., Prof.
Dept of Oceanography, Univ. of Liverpool, Liverpool L69 3BX, England
Marine pollution chemistry

Sherman, K., Dr.
US Dept of Commerce, NOAA, Northeast Fisheries Center, South Ferry Rd, Narragansett, R.I. 02882, USA
Fisheries ecology; fishery resources

Ukeles, R., Dr.
U.S. Dept of Commerce, NOAA, National Marine Fisheries Service, Northeast Fisheries Center, Milford Laboratory, 212 Rogers Ave, Milford, Conn. 06460, USA
Pollution effects on algae

Ursin, E., Dr.
The Danish Institute for Fishery and Marine Research, Charlottenlund Slot, DK-2920 Charlottenlund, Denmark
Ecosystem organization; species interactions of importance to fisheries

Zijlstra, J. J., Dr.
Nederlands Instituut voor Onderzoek der Zee, Postbox 59, Den Burg – Texel, The Netherlands
Management of wadden-sea areas

CONTENTS

Volume 25 · Number 1 · 1985

RESEARCH PAPERS

Laanbroek, H. J., Verplanke, J. C., de Visscher, P. R. M., de Vuyst, R.
Distribution of phyto- and bacterioplankton growth and biomass parameters, dissolved inorganic nutrients and free amino acids during a spring bloom in the Oosterschelde basin, The Netherlands 1–11

Fuhrman, J. A., Bell, T. M.
Biological considerations in the measurement of dissolved free amino acids in seawater and implications for chemical and microbiological studies 13–21

Bratbak, G., Thingstad, T. F.
Phytoplankton-bacteria interactions: an apparant paradox? Analysis of a model system with both competition and commensalism 23–30

Smith, J. C., Platt, T.
Temperature responses of ribulose bisphosphate carboxylase and photosynthetic capacity in arctic and tropical phytoplankton 31–37

Anderson, D. M., Stolzenbach, K. D.
Selective retention of two dinoflagellates in a well-mixed estuarine embayment: the importance of diel vertical migration and surface avoidance 39–50

Dennison, W. C., Alberte, R. S.
Role of daily light period in the depth distribution of *Zostera marina* (eelgrass) 51–61

ap Rheinallt, T., Hughes, R. N.
Handling methods used by the velvet swimming crab *Liocarcinus puber* when feeding on molluscs and shore crabs 63–70

Tsuchiya, M., Nishihira, M.
Islands of *Mytilus* as a habitat for small intertidal animals: effect of island size on community structure 71–81

Rygg, B.
Effect of sediment copper on benthic fauna 83–89

Stepien, C. A., Brusca, R. C.
Nocturnal attacks on nearshore fishes in southern California by crustacean zooplankton 91–105

Volume 25 · Number 2 · 1985

RESEARCH PAPERS

Pissierssens, P., Bergmans, M., Polk, Ph.
On the need for independently estimating organic tripton carbon content 107–109

Varela, M., Penas, E.
Primary production of benthic microalgae in an intertidal sand flat of the Ria de Arosa, NW Spain 111–119

Parslow, J. S., Harrison, P. J., Thompson, P. A.
Ammonium uptake by phytoplankton cells on a filter: a new high-resolution technique 121–129

Kana, T. M., Watts, J. L., Glibert, P. M.
Diel periodicity in the photosynthetic capacity of coastal and offshore phytoplankton assemblages 131–139

Post, A. F., Dubinsky, Z., Wyman, K., Falkowski, P. G.
Physiological responses of a marine planktonic diatom to transitions in growth irradiance 141–149

Keats, D. W., South, G. R., Steele, D. H.
Algal biomass and diversity in the upper subtidal at a pack-ice disturbed site in eastern Newfoundland 151–158

Stoecker, D. K., Evans, G. T.
Effects of protozoan herbivory and carnivory in a microplankton food web 159–167

Highsmith, R. C.
Floating and algal rafting as potential dispersal mechanisms in brooding invertebrates 169–179

Hawkins, A. J. S., Bayne, B. L.
Seasonal variation in the relative utilization of carbon and nitrogen by the mussel *Mytilus edulis*: budgets, conversion efficiencies and maintenance requirements 181–188

Achituv, Y., Ziskind, M.
Adaptation of *Coenobita scaevola* (Forskal) (Crustacea, Anemura) to terrestrial life in desert-bordered shore line 189–197

Wright, D. A., Hetzel, E. W.
Use of RNA: DNA ratios as an indicator of nutritional stress in the American oyster *Crassostrea virginica* 199–206

NOTE

Olson, R. R.
In situ culturing of larvae of the crown-of-thorns starfish *Acanthaster planci* 207–210

Volume 25 · Numbers 3 · 1985

RESEARCH PAPERS

Schneider, D. C., Duffy, D. C.
Scale-dependent variability in seabird abundance 211–218

Wilson, R. P.
The Jackass Penguin *(Spheniscus demersus)* as a pelagic predator 219–227

Veer, H. W. van der
Impact of coelenterate predation on larval plaice *Pleuronectes platessa* and flounder *Platichthys flesus* stock in the western Wadden Sea 229–238

Jeffries, H. P., Terceiro, M.
Cycle of changing abundances in the fishes of the Narragansett Bay area 239–244

Fortier, L., Leggett, W. C.
A drift study of larval fish survival 245–257

Sheppard, C. R. C.
Unoccupied substrate in the central Great Barrier Reef: role of coral interactions 259–268

Jensen, K. T.
The presence of the bivalve *Cerastoderma edule* affects migration, survival and reproduction of the amphipod *Corophium volutator* 269–277

MacDonald, B. A., Thompson, R. J.
Influence of temperature and food availability on the ecological energetics of the giant scallop *Placopecten magellanicus*. I. Growth rates of shell and somatic tissue 279–294

MacDonald, B. A., Thompson, R. J.
Influence of temperature and food availability on the ecological energetics of the giant scallop *Placopecten magellanicus*. II. Reproductive output and total production 295–303

Deming, J. W.
Bacterial growth in deep-sea sediment trap and boxcore samples 305–312
